

Clean Net Software - Calculating for Cleaning Service

The basis for every cost calculation is the time taken to carry out the required work.

Based on my experience in this type of work and the many years of calculating the costs we are able to make new cost calculations based on the floor space, type of furnishings, an standard or level of cleaning is required.

Our repertoire covers Hospitals, old people's homes, office complexes, shopping centres and window cleaning.

We developed our own software to carry out the calculations for the above mentioned scenarios. The program calculates the number of people and the time it will take to carry out the job at hand. It will also give a costing overview based on hourly rates that can be individually adjusted.

Our company has developed standard methods for cleaning which all our employees are trained in.

Through the use of our systematically procedures we are able to keep a high standard of work at competitive prices. The employees receive retraining in stages over the year to ensure the methods are always carried out correctly.

CleanNet® Programme

CleanNet will help you know how long it should take to clean a building / hospital etc. with accuracy and cost efficiency!

CleanNet ® is a cleaning and caretaker work measuring programme. It has two parts: the software and the Knowledge Bank.

The Knowledge Bank

CleanNet Knowledge bank is Official and international work study based. CleanNet® has the EU recording. Databank has millions of different readymade work packages fitting to the reality and the conditions of the building. Daily-, spring-, bed-cleaning, food services, all housekeeping works.

The measuring system has been carried out over 30 years in all different building types as offices, schools, hospitals, old-people houses, day homes, supermarkets, department stores, bars, hotels, restaurants, mills and plants, trains, aeroplanes, boats, busses, high hygiene buildings as laboratories and medicine factories. The Trade Unions have accepted the system in use.

Multilingual Programme

CleanNet is a multilingual programme. You can load in one language and print out in 9 languages. Reports: work time hours, working instructions and cost prints come out in different languages. You can pick up with cost pool codes or area codes. German, English, Spanish, Portuguese, Italian, Flemish, French, Swedish and Finnish are the languages. Russian is coming soon.

Programme is easy to learn. The full display and quick copy systems help in loading the target details. The working instructions and costs comes out automatically. You get key figures that are elastic. All currencies can be used in counting costs. Both m2 & ft2 exists. The electronic room type pictures (CNSelain-programme) and caretaker work pictures help in loading your data. You can load to the Own tank your own times and work instructions. Transfer to Excel. Compatible to other applications if needed.

Price:

We will be delighted to make you a tender.
